Drawings

The drawings filed on February 22, 2002 are acceptable subject to correction of the informalities indicated on the attached "Notice of Draftsperson's Patent Drawing Review," PTO-948. In order to avoid abandonment of this application, correction is required in reply to the Office action. The correction will not be held in abeyance.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

IN THE CLAIMS

Claim 2, line 5, the word "and" has been deleted and replaced with the word -- or --.

Claim 3, line 6, the word "and" has been deleted and replaced with the word -- or --.

Claim 6, line 5, the word "and" has been deleted and replaced with the word -- or --.

Claim 7, line 6, the word "and" has been deleted and replaced with the word -- or --.

Claim 10, line 1, the word "and" has been deleted and replaced with the word -- or --.

Claim 11, line 1, the word "and" has been deleted and replaced with the word -- or --.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Claims **1-4** are allowable over the prior art of record because the prior art does not teach or suggest a method for synthesizing absolute asymmetry which comprises the steps of providing and irradiating as presently claimed, esp., concentrating one of the enantiomers or diastereomers in the starting material and one of the enantiomers or diastereomers in the product that corresponds to the enantiomer or diastereomer not concentrated in the starting material.

Claims **5-11** are allowable over the prior art of record because the prior art does not teach or suggest a method for synthesizing absolute asymmetry which comprises the steps of providing and increasing as presently claimed, esp., increasing a concentration of one of the enantiomers or diastereomers in the starting material and

simultaneously increasing a concentration of one of the enantiomers or diastereomers in the product that corresponds to the enantiomer or diastereomer not concentrated in the starting material.

The prior art does not contain any language that teaches or suggests the above. *Salem et al.* teaches controlling the relative populations of two enantiomeric molecular states arising from the excitation of the ground state enantiomers of a chiral molecule. The excited state is not a product which is a different chemical substance (e.g., isomerized substances). Therefore, a person skilled in the art would not have been motivated to adopt the above conditions, and a prima facie case of obviousness cannot be established.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
